Activities on GitHub

On the GitHub repository of your project: in teams, analyze the following user stories and create a *test case* for each of them:

1.- As Iron Man Suit Pilot, I want that my air flaps have 0° to 85° degrees of opening for better flying control.

2.- As Sith Knight, I want that my light saber firmware turns off my saber when kyber crystal gets overheated (1420°F).

Commit your test case on your GitHub repository as it was taught on the Introduction to Control Version Module.

Do NOT forget add this instructions file!

Send an email to the following engineers with the link of your GitHub repository. Attached files will not be accepted.

Rodolfo Piña rodolfo.pinaramirez@resideo.com
